ABUNDANT NATURAL ASSETS

The Bukhara region is home to 52 natural resource deposits. The majority of these resources are found in the following areas: the Karaulbazar and Alat regions, which are abundant in oil, natural gas, and gas condensate. The Kagan and Shafirkhan regions possess significant gravel reserves. Additionally, the Bukhara region is rich in quartz, graphite, limestone, gypsum, and other minerals essential for the production of building materials.

- ☒ Limestone – 141.1 million tons
- ☰ Graphite – 9,171.9 thousand tons
- ☲ Gypsum – 102.3 million tons
- ◆ Quartz – 35.9 million tons

- ▲ Gas Condensate – 293.8 billion m³

AGRICULTURE

Agriculture in the Bukhara region is advanced in the domains of cotton cultivation, grain production, animal husbandry, sericulture and the production of fruits and vegetables.

Clusters are being established in the region for the production of agricultural products, the creation of modern greenhouses and the implementation of intensive gardening activities.

We advocate for a mindful approach to water resources. The primary rivers in the region are the Zarafshan and the Amu Darya. The Amu-Bukhara and Amu-Karakul irrigation canals were constructed to divert water from the Amu Darya to the irrigated oases.

The government promotes the adoption of innovative irrigation technologies and offers substantial subsidies for the implementation of water-efficient irrigation systems and personnel training expenses.
